

1. Uninstall the old applications (sort-of optional)

Go to “Settings” on your phone.

Go to “Manage applications”.

Go to “drishti-app”.

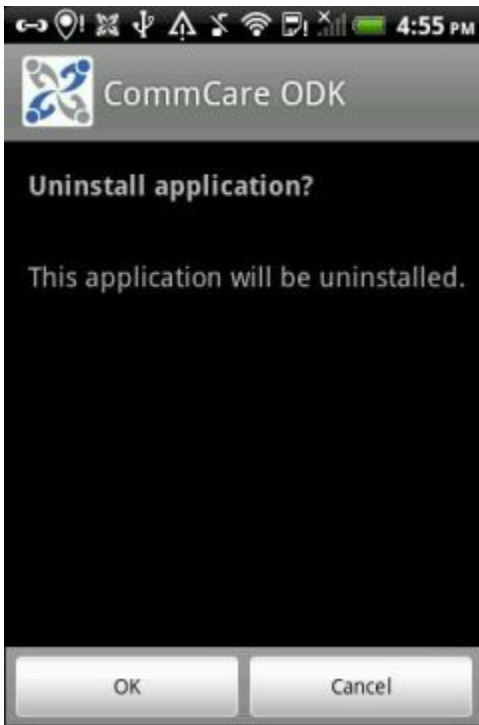

Uninstall the application.

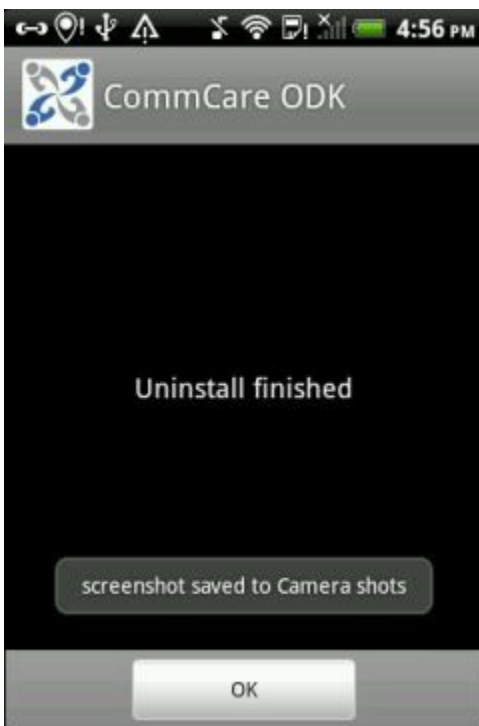

You should see something like this when it is done.

Now, do the same for CommCare ODK.

It'll ask for a confirmation.

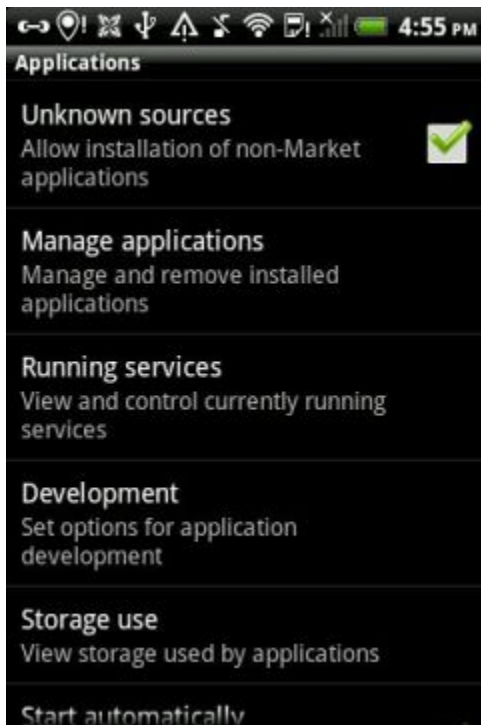

It's gone too.

2. Get the new applications (Dristhi and CommCare, APK files)

1. Download the APK file from Dimagi's build server.
 - a. Go to: <http://build.dimagi.com:250/login.html>
 - b. Click on "Login as Guest" link at the bottom of that page.
 - c. Go to [this page](#) and download the file with this name: commcare-odk.apk
2. Similarly, download the Dristhi application APK file (which will be normally sent in an email by us).
3. This part of the guide is device specific. You'll need to install the applications in whatever way your phone allows it. You might be able to use [Astro File Manager](#) to get the APK files and install them (ask

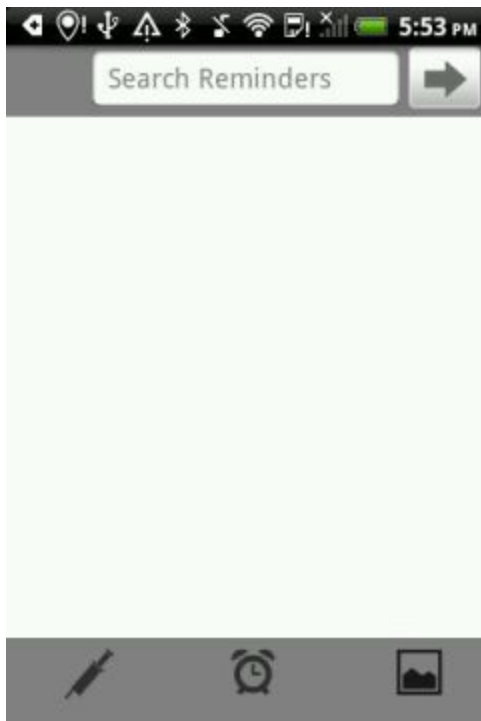

for help if you need it). You should also go to “Settings” and then the “Application” part in it to make sure that the option for “Unknown sources: Allow installation of non-Market applications” has been turned on:

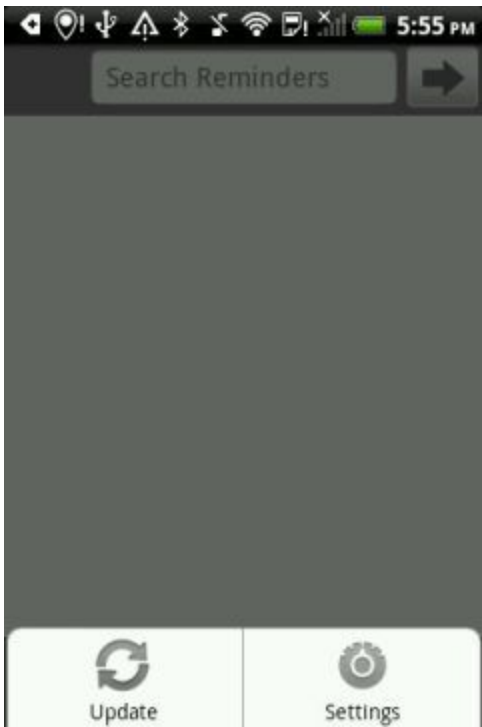

Allow untrusted sources.

3. Start the applications and test them!

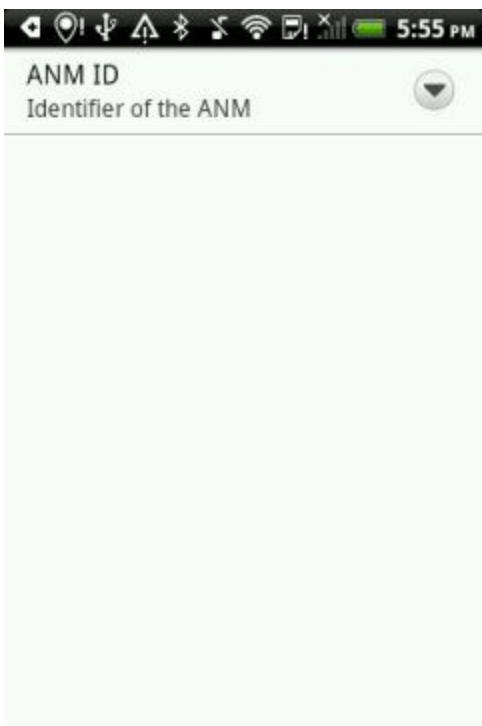

You probably know how to use CommCare already. So, here are some details about the Dristhi application.

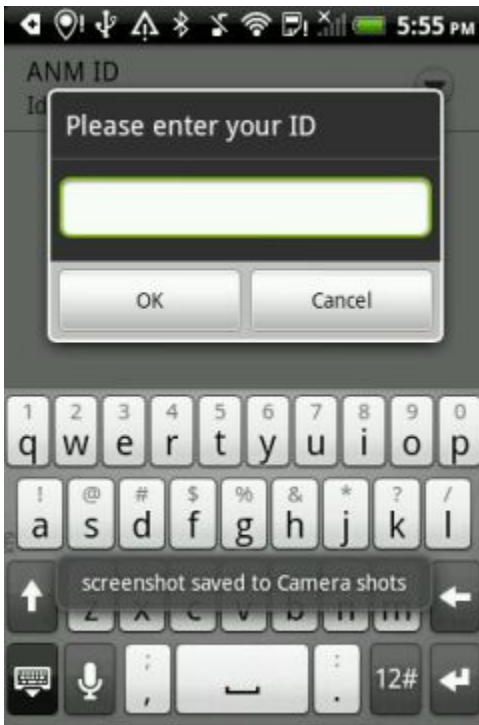

This is what you'll probably see when you start it.

Click on the “Menu” button on your phone.

Click on “Settings” to come to the ANM ID selection.

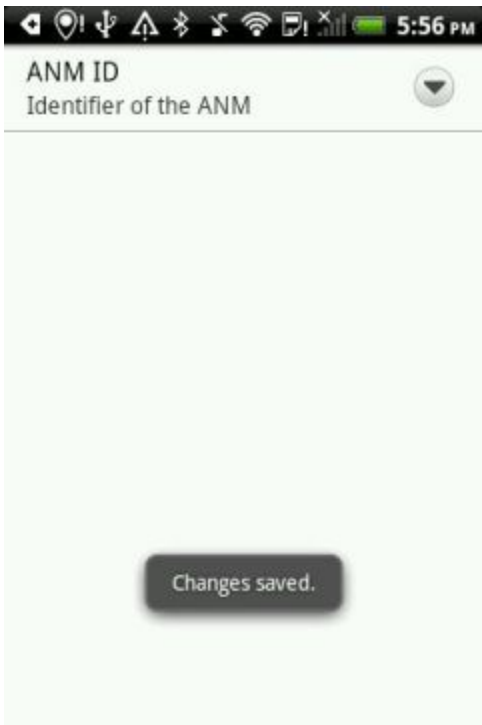

You'll see an "Enter your ID" text field like this.

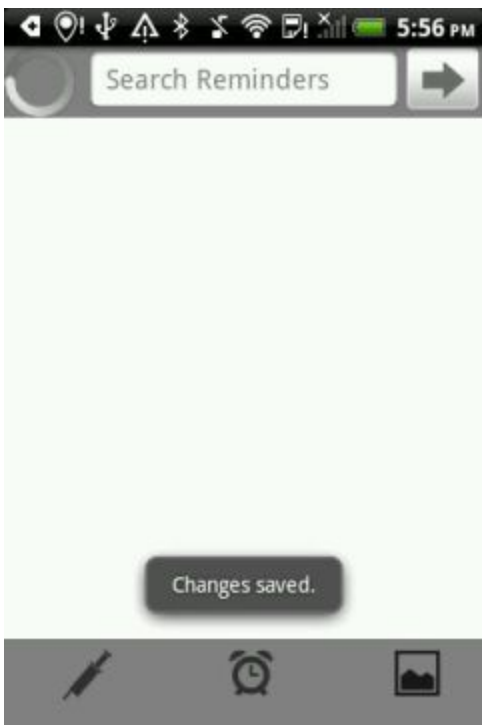

Enter "c" for now. It should work.

Make sure you're connected to the internet!

Once you press “Ok”, you’ll be back here. Press “Back” on your phone now.

You should see a progress bar like in this image.
